

Model mood-tag profiles compared with human annotators

Human reference: n=591, 1.42 tags/trial. Rows sorted by per-song Dice: best Gemini 3.1 Pro (thinking) (23.1%), weakest MOSS Audio 4B (non-thinking) (7.2%). Closest robust prevalence profile: Gemini 3.1 Flash Lite (thinking) (median | Δ|=2.3 pp). 90 model-tag cells survive global FDR q<0.05.

A. Canonical mood-tag prevalence deviation from humans

B. Per-song mood overlap

C. Prevalence bias distance
